

MB-ActiveTrap - changing the odor trap

New

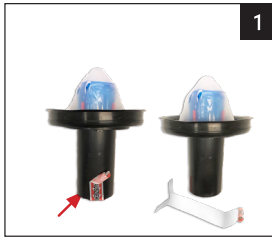

50% used

Change

Do not use fragrant urinal mats, they inhibit the microbes in the odor trap from functioning.

1 Remove the transport protection adhesive and the piece of cardboard inside will slide out.

2 Spread armature grease onto the edge of the odor trap to make it seal tight against the urinal.

3 Do NOT spread armature grease on odor traps used in ceramic urinal models.

4 Pull out the odor trap with the tool.

5 Place the odor trap in the enclosed trash bag.

6 Rinse the drainage pipe with water.

7 Clean the bowl and the drain carefully with a brush.

8 Rinse the urinal bowl and the drain with water.

9 Push the new odor trap down tight against the urinal.

10 Change the grate too. The odor trap package always contains a new grate.

11 Pour water into the urinal to make sure that the drain and the odor trap are working.

12 Finish off with spraying a thin layer of MB ActiveCleaner into the urinal bowl.
